At the heart of the community

Recently opened, Huddersfield Leisure Centre features a range of top sporting and leisure facilities, including a 25m competition pool, 20m training pool with moveable floor and a family leisure pool with interactive water features, water flume and sidewinder.

What's more, visitors can enjoy squash courts, a 15m climbing wall, bouldering wall, twelve court sports hall, large gym, cycle studio and combat room.

The centre also features changing facilities, offices, meeting rooms and a large café.

The new centre was designed to meet the clients brief for a multi-purpose sporting and leisure facility for the local community which compliments the existing street pattern and contributes to the regeneration of the town and surrounding region.

BAL tile adhesives, grouts, sealants and preparation products were all specified for the project which featured more than 10,000m² of tiling in the main changing rooms, upstairs changing rooms, pool surround, leisure pool and main swimming pools.

BAL worked extensively with project architects AHR, main contractors BAM, tiling contractors The Tiling Company and tile suppliers Ceramique Internationale Ltd from design to completion, including specification support from BAL's Technical Advisory Service (TAS) and on-site support from BAL's expert Product Support Technicians, as changing environments, substrates and uses required specialist products and advice.

A number of products were used from preparation products to adhesives and grouts – all specified to meet a particular need.

The result is a stunning development that will fulfil the leisure needs of the people of Huddersfield for years to come.

Hero products

- BAL Single Part Flexible
- BAL Microflex
- BAL Max Flex Fibre
- BAL Micromax Sealant
